Globanet

CASE STUDY:

HOW TO REPLACE AN OLD ARCHIVE SYSTEM

VERITAS™
Technology Partner

CHALLENGE

A multinational financial firm located in New York approached Globanet with a problem. It had made the decision to purchase Veritas Enterprise Vault and retire its legacy archive system, SourceOne. However, the compliance and IT departments could not retire the legacy archive appliance, because the mail data was still subject to retention based on FINRA and SEC rules. So, the IT department had to maintain the legacy system as well as the new archive solution, increasing the total cost of ownership, and the compliance department had to search for and review data in a distributed environment. In addition, the organization had to keep operations running. Multiple departments were involved and had to be notified, and everything needed to be seamlessly integrated. In other words, the impossible had to be accomplished.

SOLUTION

Globanet was able to assist this customer in gaining back control over its environment by adding a new feature to the premiere archive data migration tool, Globanet Migrate. Globanet built support into Globanet Migrate to migrate the SourceOne archive mail data to the new Enterprise Vault archive system. The combination of the new functionality with the reporting tool allowed the firm to migrate its data to the new Enterprise Vault environment, increasing ROI, retiring its legacy archive system and decreasing the overall cost to maintain its data.

Globanet Migrate's built-in capability to dynamically assign customized retention values to data during migration gave the firm's compliance and legal departments peace of mind that their data would be retained as long as required while minimizing the risk of exposure. Plus, Globanet Migrate's builtin data validation and chain of custody reports ensured that the data had been migrated without alteration.

SUCCESS

Globanet allows customers to use Globanet Migrate to run their own migrations. As a result, the cost of migrations are minimized, and migration timelines are completely under the control of customers.
